thrive

**MISSION RABIES-WORLDWIDE VETERINARY SERVICE**  
**DIRECTORATE OF ANIMAL HUSBANDRY AND VETERINARY SERVICES, GOVT OF GOA**

## Rabies Control-Goa Model

Rabies is the world's deadliest zoonotic disease. 99% of all human rabies are the result of someone having been bitten by a rabid dog in India. 60% of all human cases are in children under the age of 15.

WHO deadline to end Rabies is by 2030, theme is "Educate-Vaccinate and Eliminate".

WHO - "Vaccinating dogs is the most cost-effective strategy for preventing rabies in people", so promotes human rabies prevention through the elimination of rabies in dogs and dog bite prevention strategies.

20000 people are estimated to die in India due to Rabies annually and India is the Rabies hotspot. **Since WHO has targeted to eliminate Rabies by 2030, Mission Rabies, WVS founded by Dr.Luke Gamble took the challenge to eliminate Rabies from Goa state, India to start with and has successfully done it in partnership with Goa Government, making Goa a model for other states. Now Mission Rabies has extended this Goa model Rabies control technology to 12 states in India and many other South Asian and African countries. Goa state is the 1st state in India notified as the Rabies controlled area.**

### Rabies Status - Goa 2014 Before Project

- 17 Human Rabies cases recorded (one year). Dogs were unsafe.
- Number of animal rabies cases not investigated and recorded
- Dog population statistics of the state not updated
- Children's awareness and knowledge on rabies was poor (KAP survey 2014).
- Rabies testing facility not available in the state.
- A separate hospital (ID hospital Ponda) was allocated for the admission of the rabid patients.

### Rabies Status in Goa Current Status- 2024

- No human rabies cases since Sept 2017 to Sep 2023. Goa notified as "rabies controlled area", now Goa is a safe haven for international tourist.
- Dog population data generated- 1, 40,000 dogs present in Goa state.
- Children's rabies awareness is very high. 80% of children are educated every year.
- Rabies testing facility established at Tonca Veterinary Hospital.
- Interaction with stray/community dogs is now safer, and dog bite management improved.
- The ID hospital at Ponda has been reallocated for other diseases following the rabies controlled status.

**MISSION RABIES**

### 3 Key Elements of Rabies Control

#### **Mass Dog Vaccination**

(Smartphone Tech & App- 70% coverage)

#### **Education & Awareness**

(Protect themselves & support Rabies control)

#### **Enhanced Surveillance**

(24/7 Hotline & IBCM)

# Mass Dog Vaccination

Vaccination of all dogs(Street dogs and owner dogs)carried out from 2014 to 2021, year after year throughout Goa state covering 70 percent of dogs to develop herd immunity. The strategy was changed after 2021 following declaration of Goa state as Rabies controlled area and now the dogs in 6 border talukas are being vaccinated where the regular year-round vaccination is withdrawn from inner 6 talukas where there is no report of positive cases both in human and animals since 2019. (744333 vaccinations have been done so far in Goa)Smart phone App technology is being utilized for the scientific recording of data.

## EDUCATION AND AWARENESS

Awareness is crucial. Rabies control is a complex program involving common public, animal, Government, Animal lovers and those who dislike, so e education is an essential extension of rabies vaccination programme of Mission Rabies.

**Education Components-Key Messages**

- Rabies is serious but preventable
- Stopping dog bites-understanding dogs, avoiding bite (Demo)
- Rabies first aid & ARV injection (Demo)
- Vaccinate to Eliminate
- Support population control- ABC, Habitat control & Responsible pet ownership
- Animal welfare
- Dog population Management

**Rabies Education and Awareness is one of the key elements of this project.**

Our surveys have shown 47% of animal positive cases recorded in Goa are owned dogs, so it is not just stray dogs which spread Rabies, but owned dogs as well equally contribute. Many pet owners do not confine their dogs but let them out, to pick up the virus from street dogs. Education is the need to develop responsible pet ownership.

Vaccination hesitancy among dog owners due to lack of knowledge on Rabies burden is as well an issue. Education is the key to address this as well.

Some people still prefer to kill dogs rather than vaccinating them to make their community safe. They do not understand that killing dogs is not a solution and the fact is that the number of dogs present in a given area depends on habitat and food availability, hence killing shall result in either migration of dogs from adjacent area or birth of more puppies to keep the population static.

Over 60% of the Rabies victims are children, who are more likely to be amenable to adapting behavior change than adults so educating children is crucial.

Our education programme in India has now extended to 9 states and we have reached 11,912 schools and over 1.8 million children across all locations in India since the project began. In Goa state alone we cover 1450 schools every year and so far reached 15 lakhs children, 70000 teachers and 5 lakhs community people.

## Enhanced Surveillance

- Emergency Hotline
- Rabies response
- Suspect rabies case management

Intensive surveillance using 24hours hotline number 7744029586, finding the suspected Rabies cases, eliminating them and ring vaccinating the area where positive cases reported are the routine. Animal Rabies cases not seen at the Goa inner talukas since 2019, but only seen on the goa border talukas, due to migration of virus from endemic Maharashtra and Karnataka. (6 animal positive cases recorded in entire Goa state(12 talukas) during 2023, where as 37 animal positive cases have been recorded during the same year at the endemic border states just from 4 talukas which have entry in to Goa state, which clearly shows how Goa state is maintained under control)

End.
